Fall 2026/2027

Course Syllabus

Course Title	Development of Web Applications				
Course Code	1501465				
Credit Hours	3	Contact Hours	3		
Course Category	Program required				
Course Type	Compulsory				
Pre-requisite(s)	(1411362 - Database Management Systems OR 1411263 - Introduction to Database Management Systems OR 1501263 - Introduction to Database Management Systems) (AND 1411341 - Web Programming OR 1411340 - Internet & WWW OR 1501341 - Web Programming)				
Co-requisite(s)					
Semester	Fall 2026/2027				
Instructor Name	Email	Classroom	Section	Session Type	Time
Isam Mashhour Hasan Al Jawarneh	ijawarneh@sharjah.ac.ae	C12-002	31	Lecture Undergraduate	TR 1400 - 1515
Isam Mashhour Hasan Al Jawarneh	ijawarneh@sharjah.ac.ae	A3-179	01	Lecture Undergraduate	MW 1100 - 1215

Course Description:

The course primarily emphasizes the underlying concepts as well as the current hot tools to develop web-based database applications. It first discusses the three-tier architecture commonly used in web-based database applications. The course then introduces the techniques and tools to build web-based database applications, such as PHP, MySQL, Apache, HTML, HTTP, TCP/IP and Java scripts.

Course Objectives/Goals:

The goals of this Course are to:

- Become familiar with the principles of database applications that are integrated with the web.
- Comprehend the techniques and tools necessary for designing and developing web-based database applications.
- Become familiar with the web environment and necessary protocols for building web-based database applications.
- Work in a team and deliver a working web-based database application.

Course Learning Outcomes:

By the end of successful completion of this Course, the student will be able to:

1. Explain the concepts and different architectures commonly used in web-based database applications.
2. Integrate and use the different software components needed for developing web-based database applications.
3. Design web databases and write scripts for stateful web-based database applications.

4. Apply the techniques for querying and writing web databases.
5. Apply the techniques for data validation, data security, and user authentication and user authorization.
6. Participate in a team-work to build a web-based database application.

Alignment of Course Student Learning Outcomes to Program Student Learning Outcomes

Program Learning Outcomes (PLOs)	Course Learning Outcomes (CLOs)
Design, implement, and evaluate a computing-based solution to meet a given set of computing requirements in the context of the program's discipline.	- Integrate and use the different software components needed for developing web-based database applications. - Design web databases and write scripts for stateful web-based database applications.
Communicate effectively in a variety of professional contexts.	- Participate in a team-work to build a web-based database application.
Apply computer science theory and software development fundamentals to produce computing-based solutions.	- Explain the concepts and different architectures commonly used in web-based database applications. - Integrate and use the different software components needed for developing web-based database applications. - Design web databases and write scripts for stateful web-based database applications. - Apply the techniques for querying and writing web databases. - Apply the techniques for data validation, data security, and user authentication and user authorization.
Analyze a complex computing problem and apply principles of computing and other relevant disciplines to identify solutions.	- Explain the concepts and different architectures commonly used in web-based database applications. - Apply the techniques for querying and writing web databases. - Apply the techniques for data validation, data security, and user authentication and user authorization.
Analyze a complex computing problem and apply principles of computing and other relevant disciplines to identify solutions.	- Explain the concepts and different architectures commonly used in web-based database applications. - Apply the techniques for querying and writing web databases. - Apply the techniques for data validation, data security, and user authentication and user authorization.
Communicate effectively in a variety of professional contexts.	- Participate in a team-work to build a web-based database application.
Design, implement, and evaluate a computing and multimedia-based solution to meet a given set of computing requirements in the context of the program's discipline.	- Integrate and use the different software components needed for developing web-based database applications. - Design web databases and write scripts for stateful web-based

Program Learning Outcomes (PLOs)	Course Learning Outcomes (CLOs)
	database applications.
Identify and analyze user needs and to take them into account in the selection, creation, integration, evaluation, and administration of computing-based system.	- Explain the concepts and different architectures commonly used in web-based database applications. - Integrate and use the different software components needed for developing web-based database applications. - Design web databases and write scripts for stateful web-based database applications. - Apply the techniques for querying and writing web databases. - Apply the techniques for data validation, data security, and user authentication and user authorization.
Analyze a problem, identify and define the computing requirements appropriate to its solution.	- Explain the concepts and different architectures commonly used in web-based database applications. - Apply the techniques for querying and writing web databases. - Apply the techniques for data validation, data security, and user authentication and user authorization.
Design and evaluate a software system, process, or program to meet desired needs.	- Integrate and use the different software components needed for developing web-based database applications. - Design web databases and write scripts for stateful web-based database applications.
Function effectively on teams and communicate effectively with a range of audiences.	- Participate in a team-work to build a web-based database application.
Apply knowledge of mathematics, computer science, computer engineering, and computational biology appropriate to the discipline.	- Explain the concepts and different architectures commonly used in web-based database applications. - Integrate and use the different software components needed for developing web-based database applications. - Design web databases and write scripts for stateful web-based database applications. - Apply the techniques for querying and writing web databases. - Apply the techniques for data validation, data security, and user authentication and user authorization.

Weekly Distribution of Course Topics/Contents

Week	Topic	Comments*	CLOs
1	General Introduction.		1
2	Database Application and the Web (Web-based system architectures).		1,2,3,4
3	Internet & WWW , Protocols, Review of HTML.		1

Week	Topic	Comments*	CLOs
4	PHP Scripting Language: basics, conditions, loops, arrays.	class activity	1,2
5	PHP Scripting Language: regular expressions, strings, functions.		1,2
6	MySQL DBMS: managing DB, tables, indexes, querying, join queries, modifying the DB.		2,3,4
7	Querying Web Databases.		3,4
8	User-driven Querying.	class activity	4,5
9	Writing to Web Databases.		4,5
10	Writing to Web Databases.		4,5
11	Validation at the Client-side and Server-side.		5
12	Sessions		5
13	Authentication and Security.	class activity	5
14	Case study: Customer Management, Shopping Cart Management, Ordering and Shipping, Templates, Searching and Browsing.		1,2,3,4,5,6
15	Revision & project presentations.	Project	6
16	Final Exam		1,2,3,4,5,6

Information on out-of-class assignments with due dates for submission

Assignment/Activity	Due Date	Comments
Quiz1	week4	
Quiz2	week9	
quiz3	week13	
class activity 3	Week13	
class activity 1	Week5	
class activity 2	Week8	

Students' Assessment:

Students are assessed as follows:

Assessment Tool(s)**	Date	Weight (%)
Quizzes		10
Midterm Exam		20
Class Activity		10
Projects		15
Final Exam		45
Total		100

Course Outcome Assessment Plan:

Course LOs	Teaching/Learning Method(s)	Assessment Tool(s)	Performance Indicators	UoS competencies	Other competencies
Explain the concepts and different architectures commonly used in web-based database	- Lectures	- Exams - Class Activity	70.0% of student achieve 70% of the CLO	- Problem solving	

Course LOs	Teaching/Learning Method(s)	Assessment Tool(s)	Performance Indicators	UoS competencies	Other competencies
applications.					
Integrate and use the different software components needed for developing web-based database applications.	- Lectures	- Exams - Class Activity	70% of student achieve 70% of the CLO	- Critical and analytical thinking	
Design web databases and write scripts for stateful web-based database applications.	- Lectures	- Exams - Class Activity	70% of student achieve 70% of the CLO	- Innovation / creative thinking	
Apply the techniques for querying and writing web databases.	- Lectures	- Exams - Class Activity	70% of student achieve 70% of the CLO	- Innovation / creative thinking	
Apply the techniques for data validation, data security, and user authentication and user authorization.	- Lectures	- Exams - Class Activity	70% of student achieve 70% of the CLO	- Critical and analytical thinking	
Participate in a team-work to build a web-based database application.	- Project	- Projects	70% of student achieve 70% of the CLO	- Teamwork or collaboration	

Scope and Nature of Assessment Tools:

The aim of this section is to clarify what is required and how to submit, grade and assess each assessment tool:

Exams:

This assessment tool is composed of two exams, a midterm exam (20%), and a final exam (45%). The midterm exam covers the first three learning outcomes of the course and covers the materials of the first five chapters. The final exam covers all course learning outcomes and all course materials with all chapters included.

Class activity:

Students are given an exercise to discuss and solve . class activities enhances peer-learning and problem-solving skills, while developing interpersonal skills.

Quizzes:

Several quizzes spaced equally during the semester to measure student comprehension of the concepts.

Project:

The term project is an indispensable tool for assessing student's ability to work in a team project throughout the semester, covering all the practical topics discussed in the weekly schedule. It measures the student's ability to collaborate and be an active learner through an enhanced project-based learning experience.

The objective of the project is to gain experience in designing and developing online web-based database applications. Moreover, students are to acquire team-work skills, thus they will be asked to group up in teams (2-3 students per team depending on the number of students). The project will be built step-by-step, where techniques and principles are to be incorporated as they are given in class. Projects will be demonstrated in class at the end of the semester. Check the project guidelines in the course website for more details.

Teaching and Learning Resources:**Textbook(s):**

Welling, L., and Thomson, L.. (2016). PHP and MySQL Web Development. 5th ed. Addison-Wesley Professional;.

Recommended Readings:

Kromann, F. M.. (2018). Beginning PHP and MySQL, From Novice to Professional. 5th ed. Apress.

Other Resources:

Open source software: XAMPP (Apache, PHP, MySQL)

Attendance policy:

Attendance is compulsory. A student missing 10% of the total allocated course hours will receive 1st warning notice and a student missing 15% will receive 2nd warning notice. A student missing 20% will be forced to withdraw (in accordance with the university regulations).

Plagiarism/Cheating:

Students are expected to do their own work. You are allowed to work on assignments in teams only if specified by the instructor. In other words, students are encouraged to communicate about general principles of the course, but all assigned homework must be done on an individual basis. The instructor is available to provide any assistance that you may need. Cheating is considered a serious offense by the university. You should be aware of the severe penalty for cheating (refer to the student code of conduct published in the university catalogue).

Notes:**Grading Policy:**

Cutoffs of letter grades at the end of the semester will be close to the standard scales as required by the University. Requests for regrading will be accepted up to one week after the return of graded assignments/exams. Such requests must be accompanied by a justification for why the problems should be given higher scores.

Teaching and Learning:

Lectures, class activities, group project (report & demo).

Grading rubrics:

Grading Rubric for <i>Course Projects</i>					
Scaled Score:		1/0	2	3	4
Criteria	Weight	Below Standard	Approaching Standard	At Standard	Exceeds Standard
Introduction	10%	No clear introduction, absent, or no evidence.	The introduction states the main topic but does not adequately preview the structure of the report.	The introduction states the main topic and previews the structure of the report.	The introduction is engaging, states the main topic and previews the structure of the report.
Data	20%	Data are inadequate and selected following the wrong procedure.	Data are selected but procedure of data selection is not followed.	Data selected following the standard procedure but not described in report.	Data are correctly selected following standard procedure and adequately described in report.
Analysis and Reporting of Results (if applicable)	20%	Calculated wrong measures and analysis not relevant.	Calculated correct measures but analyses are not correct.	Calculated correct measures but analyses are not adequate.	Calculated correct measures and analyses are correct and provide more insights.
Authenticity and Citation*	20-30%	Some contents are paraphrased; plagiarism is most likely.	Some content is paraphrased; plagiarism is likely.	Some content is paraphrased and no suspicion of plagiarism.	All contents are original and well written.
Writing	20-30%	Errors in language that cause the content to be mostly incomprehensible.	Some errors in language that often inhibit comprehension.	Some errors in language that do not often inhibit comprehension.	Almost no error in language and well written.
Teamwork	10%	Team did not collaborate or communicate well.	Team did not collaborate or communicate well. A lack of mutual respect was frequently noted.	Team did collaborate or communicate well.	Team did collaborate or communicate well with high level mutual respect.

Grading Rubric for <i>Course Assignments</i>					
Scaled Score:		0/1	2	3	4
Criteria	Weight	Below Standard	Approaching Standard	At Standard	Exceeds Standard
Focus: Purpose	10%	No awareness	Shows limited awareness of purpose.	Shows awareness of purpose.	Purpose is clear.
Main idea	10%	No main idea	Vague sense of a main idea, weakly supported throughout the paper.	There is a main idea supported throughout most of the paper.	Clearly presents a main idea and supports it throughout the paper.
Organization: Overall	5%	No sense of organization	There is a sense of organization, although some of the organizational tools are used weakly or	Good overall organization, includes the main organizational tools.	Well-planned and well-thought out. Includes title, introduction, statement of main
